

# 8조 CI/CD 구현 계획

(구현사항 미비로 계획서 제출로 요구사항 조정)

# 1. CI 파트 구현 계획

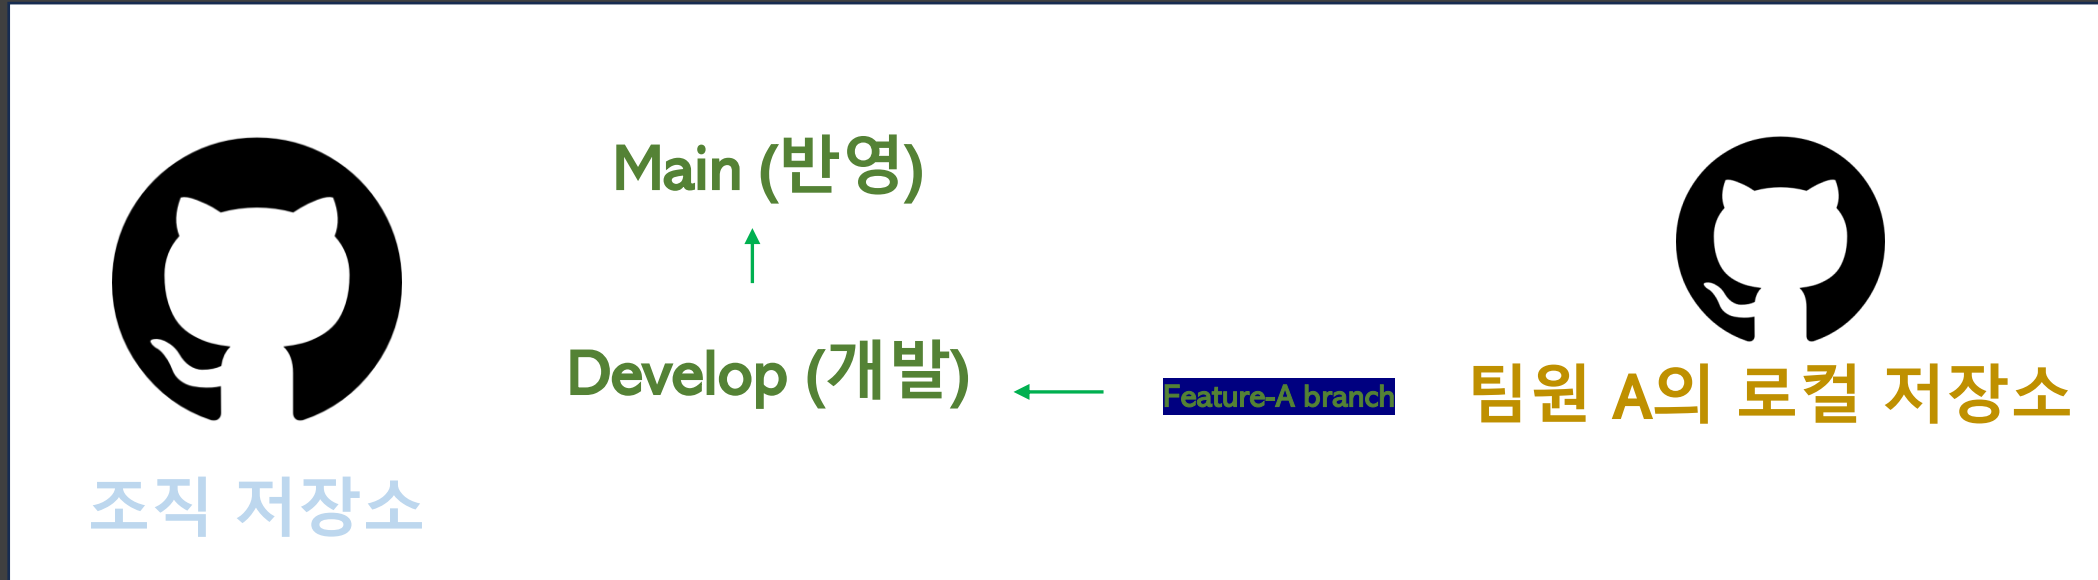

## 1.버전 관리 전략:

[원격 저장소]

(1) MAIN, (2) DEVELOP,

[로컬 저장소]

(2)를 클론 받은 뒤 feature 단위로 작업후 DEVELOP에 PR

# 1. CI 파트 구현 계획

## 2. 자동 테스트, 코드 품질 검사:

- ktlint를 이용한 코드 스타일 검사
- gradle을 이용한 테스트 (run: ./gradlew -Dorg.gradle.internal.launcher.welcomeMessageEnabled=false --no-daemon --no-parallel --continue test --stacktrace)
- testCodeTest (향후 예정)

KTlint 스타일 검사 예시

# 1. CI 파트 구현 계획

이미지 PUSH:

[메인에 병합시]  
ECR 푸시, ECS 에서 이미지 실행

## 2. CD 파트 구현 계획

### 1.버전 관리 전략:

[원격 저장소]

(1) MAIN, (2) DEVELOP,

[로컬 저장소]

(2)를 클론 받은 뒤 feature 단위로 작업후 DEVELOP에 PR

(1) VPC → Public Subnet에서 실행

(2) ECR 이미지 → Task Definition 생성 (fargate) → Target Group 지정.

(3) Load Balancer → target group과 연결

(4) ECS → Load Balancer, Target Group, Auto Scaling, Task Definition 등록

(5) Cloud Watch에서 server container 모니터링
